

Government of India - MoSPI Industrial Statistics Wing (ISW)

Annual Survey of Industries (ASI): Schedule A-J Verification Manual

Official Bulletin MoSPI/ISW/ASI-2023-MANUAL | Target Cadre: Statistical Investigators

1. Factory Frame Eligibility and Sampling Thresholds

Census Sector comprises all registered factories employing 100 or more workers with electricity.

Sample Sector covers the remaining factory universe sampled with probability proportional to size.

Data collection covers Block A (identification), Block C (fixed capital), and Block H (inputs/fuels).

2. Depreciation, Net Capital Formation, and Output Audit

Net Value Added (NVA) is calculated as Gross Value Added (GVA) minus Depreciation.

Reported negative GVA must be audited for excessive fuel inputs, inventory writedowns, or shutdown phases.

Contractual labor payments in Block E must conform to minimum wage gazette notifications.

3. Microdata Masking and SDC Disclosure Governance

Under the National Data Governance Framework (NDGFP), enterprise identifiers must be cryptographically hashed.

K-anonymity constraint ($k \geq 3$) ensures no 4-digit NIC cell discloses proprietary factory output.
